

New Fetal Treatment Center mobile app

Jan 28, 2016

The Fetal Treatment Center (FTC) has just launched a new mobile app, now available for download in the Apple app store and the Google Play for Android devices.

One of the best ways to develop a good relationship with our patients is to have a quality connection with our referring physicians ? which is why we have developed the new Fetal Treatment Center mobile app. While the app is freely available to download for anyone including patients, its main focus is referring physicians.

The app gives physicians instant access to our treatment guidelines, educational videos, and news updates for our research and clinical programs. With the app, physicians will have instant access to our clinical team, making the process of referring a patient seamless and efficient, and will be better able to advise their patients.

Our referring physicians will have all the information that they need at their fingertips including:

- **Detailed treatment guidelines** including associated conditions, workup, options for

fetal intervention, and followup guidelines

- **News feed** to keep you informed of our new clinical programs, research, clinical trials, and more
- **Education videos** to help explain about the conditions we treat
- **Quick contact info** to provides a seamless and efficient way of referring patients to our clinic

Available on the **App Store**

Look for our booth at the Society for Maternal-Fetal Medicine's 36th Annual Pregnancy Meeting?^[3] in Atlanta, GA, Febuary 3rd-5th where we will be talking about our program and presenting our new app!

The app was developed by Colin Fahrion, ^[4] Website Design Director, UCSF Department of Surgery, and Web Manager Pediatric Surgery, and Fetal Treatment Center & Neonatology, for the "App Store" (Apple) and "Google play Store" (Android).
